

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

WE
2/1/21
Claim 1 (currently amended): A method for tuning a system comprising:

tuning a video tuner to a first frequency;
receiving a first field of video associated with the first frequency;
tuning the video tuner to a second frequency; and
receiving a second field of video associated with the second frequency, wherein the first field of video and the second field of video are adjacent in time; and
displaying the first field of video as substantially full motion video by interpolating missing fields of video not received by the video tuner and displaying the second field of video as substantially full motion video by interpolating missing fields of video not received by the video tuner.

Claim 2 (previously presented): The method of claim 1, wherein the step of tuning the video tuner to a second frequency further comprises tuning the video tuner to the second frequency during a vertical blanking interval.

Claim 3 (previously presented): The method of claim 1 further comprising:
providing a second frequency indicator to the video tuner prior to the step of tuning the video tuner to a second frequency.

Claim 4 (original): The method of claim 3, wherein the step of providing includes providing the second frequency indicator in less than approximately 1.2 milliseconds.

Claim 5 (currently amended): The method of claim 1 further comprising the steps of:
displaying the first field;

tuning the video tuner to the first frequency after the step of receiving the second field;
receiving a third field associated with the first frequency;
displaying the third field, wherein the first field and the third field are displayed as
adjacent frames of a common video image.

Claim 6 (original): The method of claim 1, wherein the first and second fields of video are adjacent when no fields of video are transmitted at the second frequency after a last data of the first field of video and before the first data of the second field of video.

Claim 7 (canceled)

Claim 8 (currently amended): A method of providing video, the method comprising:
tuning a video tuner to a first frequency;
receiving a first field of video associated with the first frequency;
tuning the video tuner to a second frequency;
receiving a second field of video associated with the second frequency, wherein the first field of video and the second field of video are adjacent in time;
tuning the video tuner to the first frequency;
receiving a third field of video associated with the first frequency;
displaying an image based upon the first field at a first location of a display device;
displaying an image based upon the second field at a second location of a display device,
wherein the first location and the second location are substantially mutually exclusive; and
displaying a substantially full-motion video ~~an image~~ based upon the first field and the
third field at the first location of the display device, ~~to provide a full motion video sequence.~~

Claim 9 (currently amended): A method of displaying video, the method comprising:
alternating reception of a first field set and a second field set at a common video tuner,
wherein the first field set is associated with a first frequency, and the second field set is associated with a second frequency; and

simultaneously displaying the first field set and the second field set as substantially full motion video.

Claim 10 (previously presented): The method of claim 9, wherein the step of alternating includes alternating reception of a first field set and a second field set at a common video tuner in approximately 1.2 milliseconds.

Claim 11 (currently amended): The method of claim 8, wherein the step of simultaneously displaying includes simultaneously displaying the first field set and the second field set as substantially full motion video on a single display device.

Claim 12 (currently amended): The method of claim 9, wherein the step of simultaneously displaying includes simultaneously displaying the first field set and the second field set as substantially full motion video on different display devices.
